

JASMIN TROTTER

Profile

Passionate software developer with experience contributing to enterprise-level applications in production.

Experience

Software Engineer, Nike (contract through Kforce); Beaverton, OR

March 2019 - Present

On the Data Capture Digital Marketing team, I develop a client-side library written in TypeScript and embedded in multiple applications across nike.com.

- Implement new features in our digital marketing library (DCM.js) to provide user behavior data that informs marketing stakeholder decisions.
- Improve product architecture by addressing technical debt with an eye towards modernizing.
- Create and review pull requests and fulfill weekly release manager responsibilities.
- Collaborate on an Agile team, including sprint ceremonies and daily scrum, as well as pair/mob programming.
- Provide production support, conduct user acceptance testing, and document results for team and stakeholder communications.
- Increased test coverage from 22.5 to 87%, with automated coverage threshold in CI.

Frontend Developer, Renaissance Systems; Camas, WA

November 2018 - March 2019

UI developer for the *GreenTracker* project, an enterprise application for businesses in the cannabis industry.

- Implement frontend features in React with Redux.
- Utilize UI frameworks such as Material UI, AG Grid, Bootstrap.
- Implement styling with CSS/SASS from mockups provided.
- Fix bugs. Refactor legacy code. Participate in Agile development practices.

Full Stack Developer, Ballet Body by Jasmin; Portland, OR

March 2018 - Present

Built *Student Portal*, a full stack application for ballet students to purchase classes and view a history of their purchases on their account.

- A demo version of this app can be found at <https://student-portal-balletbody.herokuapp.com/>

Education

University of California, Berkeley — B.A. Interdisciplinary Studies, 2015

Thinkful — Completed 6-month Full Stack JavaScript Development program, 2018

Skills

- JavaScript
- TypeScript
- Node
- Express
- Unit Testing
- Jest
- React
- Redux
- REST APIs
- ES6 Promises
- Command line interface
- Git and GitHub
- HTML5
- CSS3
- SASS
- CI/CD pipelines
- Webpack
- jQuery
- NoSQL databases
- Software documentation
- Refactoring
